# LONGEST, SHORTEST, AND AVERAGE DAILY WORKING TIME: BY TOWNS.

[In this presentation, the "establishment" is the basis; that is, the figures indicate the number of establishments reporting the longest and shortest daily working time in hours and fractions of hours for male adults, and the average daily working time from May to November, and from November to May, in hours and fractions of hours, for all persons employed. "Not stated" includes those establishments not making any return whatever as regards longest, shortest, and average daily working time. The four totals given opposite the name of each city and town, in each case indicate the total number of establishments engaged in manufacturing and mechanical industries in each city and town. The towns of Cottage City and Gosnold, in the county of Dukes, and the town of Montgomery, in the county of Hampden, having no manufacturing or mechanical establishments, have been omitted from this presentation.]

---

## YEARLY WORKING TIME: BY TOWNS.

[The objects of this presentation are to show, for each city and town in the Commonwealth, in days, first, the *possible* yearly working time; second, the *actual* running time; third, the *short* time; fourth, the *idle* time; fifth, by a combination of the preceding figures for short and idle time, the combined *lost* time from various causes, and sixth, the *net actual* time worked. The *possible* working time is arrived at by taking for each establishment 307 days as the normal yearly working time, and adding all over time in excess of 307 days. The *net actual* time worked is this *possible* working time less the combined *lost* time. The *short* time includes all those instances where establishments ran on three-quarters time, two-thirds time, half time, or less than half time for a specified number of days, this short time being reduced to its equivalent in actual days lost. *Idle* time includes days idle from stoppages for repairs or improvements, suspensions or shut-downs on account of slack trade, strikes or lockouts, etc. The days not worked on account of establishments running on short time added to the days not worked on account of establishments being idle make the total *lost* time.

The use of the asterisk (\*) indicates duplications. For instance, an establishment might run part of the year on three-quarters time and part on half time, requiring the same establishment to be entered twice in the column headed "Establishments." Again, the same establishment might have lost time from stoppages for repairs and also from suspensions on account of slack trade; or, the same establishment might run for a number of days on short time and also lose time from stoppages, etc.; these variations in running time would cause the establishments to be considered twice, and the asterisk points out these necessary duplications.]
